Novelties

VIBURNUM CARLESI COMPACTA

This plant was discovered several years ago in the nursery in a block of Viburnum carlesi. It is slower growing and has distinct dark green shiny leaves. It grows into a very compact plant and for this reason is called Compacta, ideal for use in foundation plantings. It buds up very heavily when a matured plant. The size, color and fragrance of the flowers are exactly like those of Viburnum carlesi. This plant is a distinct novelty of which a limited quantity is offered.

HYDRANGEA PETIOLARIS

(Climbing Hydrangea) ****→

An attractive vine which does equally well in shade or sun. Its foliage is bold, clean and shrub-like and a rich dark green color. Short spur branches are topped with white, fragrant, Hydrangea-like blooms during the summer and lasts for a considerable period. Climbing Hydrangea is one of the finest and choicest vines grown. It clings by rootlets to walls and trees without support and can be planted against rocks for a cover.

VIBURNUM WRIGHTI

Upright and grows slower than Viburnum dilatatum. The leaf is deeply veined and the bright red berries color up in August and remain bright red throughout the fall even after the foliage takes on a fall color. The plant is excellent for berry effect. Being slow growing makes it suitable for use in ranchtype house plantings.
